To Whom It May Concern:

Installers of the Perma-Lateral CIPP Lining System are all trained and certified by Perma-Liner Industries, Inc. of Clearwater, Fl. We train all of our installers to the inversion and pull in place methods as outlined in ASTM F-1216 and ASTM F-1743.

All of our liner and calibration tubes are made in house. We use a needle punched felt with a reinforced scrim to prevent the liner from stretching during inversion. The exterior coating is a flexible Poly Vinyl Chloride transfer coating which has good chemical resistance along with good resistance to hydrolysis. These tubes come in sizes from 3" – 12".

The resin supplied by Perma-Liner Industries is a 100% solids, biphenol A based Epoxy resin. This resin passes all physical testing as outlined in ASTM D-543, 790, 695, and 638. Third party testing is available upon request.

If you have any further questions please feel free to contact me directly.

Kindest Regards,

A handwritten signature in blue ink, appearing to read "C. Perkins", is written over the typed name.
